# Artificial Intelligence Cyber Security

## But First...

Let's talk about ideas for where this group is going:

<https://hsv-ai.github.io/A-Vision-For-Huntsville-Artificial-Intelligence/>

# Fast.ai Course - Practical Deep Learning For Coders, Part 1

7 Week Course - requires a year of programming experience and high school math.

There are around 20 hours of lessons, and you should plan to spend around **10 hours a week** for 7 weeks to complete the material. The course is based on lessons recorded during the first certificate course at [The Data Institute at USF](https://www.datacamp.com/courses/the-data-institute-at-usf).

We will need to space these out at least bi-weekly to give everyone time to keep up.

The course material is set up for the examples to be run in the cloud - either at

[www.crestle.com](http://www.crestle.com)

[www.paperspace.com](http://www.paperspace.com)

To the best of my knowledge, cost of the cloud instance will be somewhere around \$15/mo. I am looking for a way to get this sponsored for our group.

# Ok - now back to the regular program
